**DETAILED ACTION**

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Castro et al '038 in view of Korgel et al.

The common-inventor patent to Castro et al discloses functionalized nanocrystals, method of preparation, and use in detection systems. Patentees do not disclose the use of liposomes in the preparation of the nanocrystals. It is the Examiner's position that said disclosure would have been obvious in view of the teachings of the secondary reference which discloses method for preparing nanocrystals using liposomes such as phosphatidylcholine. Patentees teach that the growth of nanocrystals in liposomes may provide a more rationally based method to produce particles of predetermined size, shape, and crystallinity.
